Join the successful EUREM Community

Dear future European EnergyManager,

in the year 1999 the Nuremberg Chamber of Commerce and Industry initiated the qualification "European EnergyManager" (EUREM) for training energy managers in Germany. EUREM is an ambitious standardized training programme and successful network for European EnergyManagers, which is already implemented in 26 countries worldwide. An international Consortium of experts from Austria, Czech Republic, Finland, Germany, Greece and Italy coordinate the development and extension of this programme (www.energymanager.eu).

Until now more than 4.000 European EnergyManagers from over 300 EUREM courses all over the globe are partners of the successful network of energy efficiency specialists. In Poland two editions of the course have been completed by now and further more are going to be offered. The Polish Chamber of Commerce is the licensed EUREM provider in Poland and a well recognized organizer of EUREM trainings.

There are many reasons for employing an energy manager. Despite already existing efficiency and quality standards, companies still have a huge energy and costs saving potential. It is characteristic for EUREM that it is based on real needs of manufacturing companies and practice in energy management and that all countries use the same method and standardized training materials. This guarantees that every European EnergyManager has basic knowledge in all relevant energy fields and also learns specific know-how about implementing energy efficiency projects.

EUREM helps to reduce costs and increase the competitiveness of the respective companies while contributing significantly to global climate protection. Therefore we highly recommend you to take part at the EUREM training organized by the Polish Chamber of Commerce and to join the successful worldwide EUREM Community.
