

## Automated, smart and reliable sobriety control for your company

**worksober.com** is a fully automated and reliable sobriety control service for business.

Cloud based system collects information from specialized breathalyzers with face recognition and is mostly used in:

- **In factories, logistics centers, construction sites** (stationary breathalyzers)
- **In mobile facilities** with staff performing sobriety checks (portable breathalyzers)
- **Company cars** and other vehicles (interlock breathalyzers)

**worksober.com** is an intelligent biometric sobriety control system that uses face recognition technology to identify an employee and check sobriety before employee enters and finishes work.

**worksober.com** allows centralized control of employees' sobriety, ensures accurate accounting of working time and makes integration with access control systems possible. Artificial intelligence solutions help our customers not only ensure 100% employee sobriety in the workplace, but also increase business efficiency.

Today the system is used daily by more than 250 companies and tested by over 75,000 employees. Abroad, our service is offered in countries such as the United Kingdom, Japan, Spain and other EU countries.

This service has all the tools available for partners to manage our service independently and is significantly more advanced compared to the usual off-line stand-alone breathalyzers.

### Why customers choose this service?

- The system is full automated with no for control staff, which saves costs;
- Reliability given that our technology eliminates the risk of fraud;
- Centralized and timely information on tests and violations;
- Integrates with access control systems, efficient work time accounting;
- Integrates with other enterprise business management systems via API;
- Adapted to transport, manufacturing, construction, forestry sectors;
- No need to purchase equipment, no maintenance costs – everything is taken care of by the dedicated worksober.com team.

### Benefits for partners:

- New, unique in the market and attractive service for customers;
- The service model ensures stable income;
- Adapted tools are integrated into the system and include such features as “service desk”, “enterprise service configuration”, “remote device management”, “automated device log collection” and many others that allow for quality management and operation of the service.
